Please bring suitable clothing and a head lamp!

Two-Day Course in Equine Dentistry: Focus on Periodontal Disease and Infundibular Caries

This comprehensive two-day course offers veterinarians an in-depth exploration of equine dental anatomy, pathology, and treatment techniques. Emphasis is placed on the anatomical foundations of equine dentition, providing essential context for understanding common dental diseases.

Key topics include the detailed anatomy of cheek teeth and periodontal structures, recognition of early and advanced stages of periodontal disease, and evidence-based treatment strategies. The course also covers the anatomy of maxillary cheek teeth relevant to infundibular structures, enabling accurate diagnosis and appropriate management of infundibular caries.

Through lectures, interactive case discussions, and hands-on practical sessions, participants will strengthen their diagnostic skills and gain confidence in treating these challenging conditions. This course is ideal for equine practitioners aiming to advance their knowledge and clinical proficiency in equine dentistry.

Programm

(Programming subject to change)

Wednesday 1st Oct 2025
